

Building A Restaurant Website With Bootstrap

This document contains contents for:

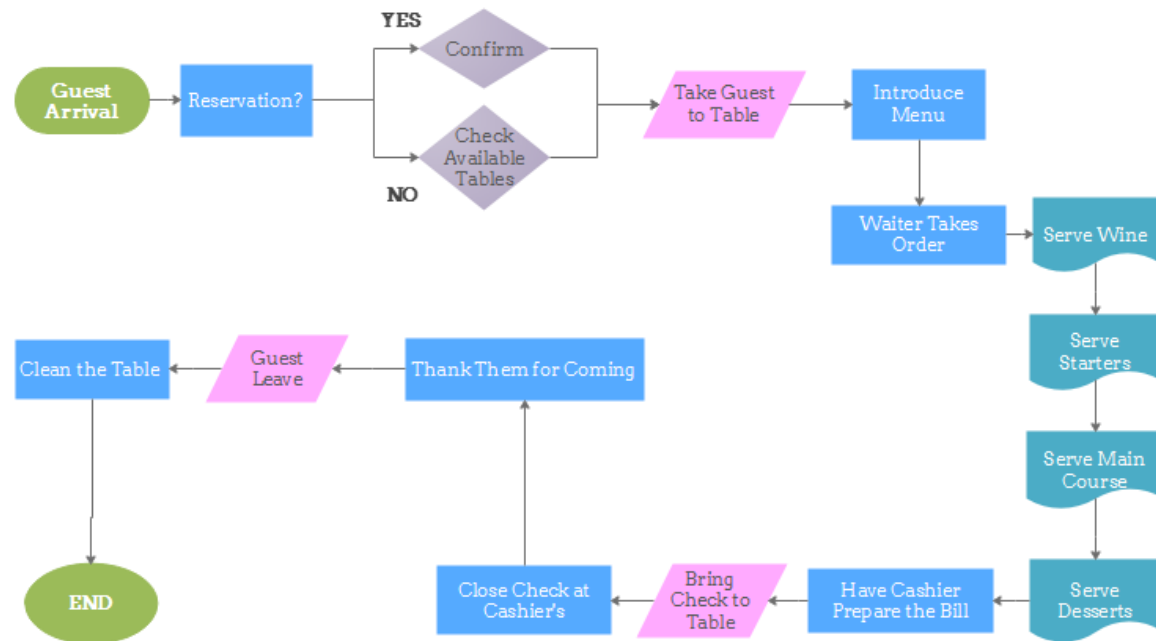

- Project Description
- Flow of the Application
- Core concepts used in project
- Conclusions

1.Project Description:

Build a responsive website for a restaurant where users can read the details of the restaurant.

- You are a web developer at a service-based web development company called Kite Technologies.
- The company has been approached by a client who wants to build a website for their restaurant named Ming's Diner.
- The website should provide the users a brief overview of the restaurant and its bestsellers, its address, as well as an option to contact the restaurant.
- During sprint planning, you agree to lead this project and develop the website.
- Building the website using HTML
- Adding Bootstrap to the website
- Adding a landing page, a navbar, a CTA button, a grid, and a footer
- Adding a contact form for users to contact the restaurant
- Pushing the code to the git repository

2.Application Flow:

3.Core concepts used in project:

- HTML: To define the content of the website
- Bootstrap: To build the website
- JavaScript: To handle events and responses
- JQuery: To include JavaScript plugins like modals, tooltips, etc.

4.Conclusions:

This project is designed to create a Restaurant Website Using Bootstrap.
